Congratulations on your purchase of a Sekonic SPECTROMETER C-7000. Please read the operating manual carefully to properly utilize the many features and benefits of this precision instrument.

The Sekonic C-7000 is a portable spectrometer equipped with CMOS linear image sensor that can measure from 380nm to 780nm. Its large color LCD, conveniently displays correlated color temperature, color rendering index (CRI), chromaticity diagrams and color spectrum of various light sources.

The Sekonic C-7000 illuminance measurement complies with JIS Class A and DIN 5032 Part 7 Class C standard making it a reliable illuminometer. Its capabilities make it suitable for checking the quality of a light source during manufacturing and inspection processes, as well as measuring the quality of light for various areas such as office environments, construction sites, road lighting, and factory spaces.

The application software of "C-7000 Utility" can be used to save the measurement and graphic display, change the meter setting and update the firmware while meter is connected to computer or tablet by USB cable.

 Download the Utility, and install it on your computer. To use this Utility, connect your computer to the C-7000 using a USB cable (Mini-B type, available commercially).

#### Safety Precautions

Before using this product, please read this "Safety Precautions" for proper operation.

	<b>G</b> The WARNING symbol indicates the possibility of death or serious injury if the product is not used properly.	
	<b>CAUTION</b> The CAUTION symbol indicates the possibility of minor to moderat personal injury or product damage if the product is not used proper	
NOTICE	Image: Notice         The NOTICE symbol indicates cautions or restrictions when using the product. Please read all notes to avoid errors in operation.	
NOTE	The reference symbol indicates additional information about the controls or related functions. Reading these is recommended.	
•	The arrow indicates reference pages.	

### 🕂 WARNING

- Infants or toddlers may accidentally wrap the strap around their neck, so please place it in a location out of their reach. There is a danger of suffocation.
- Do not place batteries in open flames, attempt to short, disassemble or apply heat to them, or use unspecified batteries. They may burst and cause fires, serious injury, or damage to the environment.
- Do not use the spectrometer in a place containing flammable or combustible vapors. Otherwise, it may cause a fire.
- Do not to drop fluids on the spectrometer. Also, do not attempt to insert metals into it. Doing so may cause a fire or an electric shock. If any fluid drops on or a metal is inserted into the spectrometer, turn the power OFF immediately, and remove the battery (or unplug the USB power cable). Then, consult our Support Center for assistance.
- Do not disassemble or modify this spectrometer. Doing so may cause a fire or an electric shock.

i

### AUTION

- Do not handle this product with wet hands, or leave it in the rain or in a location where it may be splashed with water, submerged, or come into contact with moisture. There is a danger of electric shock if the "Flash Light Cord (PC) Mode" is used. This may also result in damage to the product.
- Do not attempt to disassemble the product for modification or parts replacement. It may affect measurement results or damage the meter.
- Any significant impact to the meter housing or LCD screen can cause physical damage and failure of performance.
   Even when the meter is in the bag or pocket, damage is possible under severe impact or pressure conditions.
- Do not attempt to play the included CD-ROM using an audio CD player. It may impair hearing or damage speakers and earphones.
- Gently tap the meter's LED panel when changing modes or making selections.
   Using pointed pens or pencils may scratch the LCD screen or damage the product.
- Infants or toddlers may accidentally grab the strap and swing the product, so please place it in a location out of their reach, as the meter may be damaged by impacts.
- Be careful that the neck strap does not come loose when carrying the product, as the meter may be damaged when dropped.
- This neck strap is made of polyester fiber.
   Please refrain from using the product if synthetic fibers cause your skin to become irritated, inflamed or itchy in order to prevent worsening your symptoms.
- Do not measure a bright object that emits light exceeding the measuring range (wavelength and illuminance). They may damage the optical components and result in inaccurate measurement.
- Before removing or replacing the battery or USB cable, always turn the power switch OFF. Otherwise, the spectrometer may fail.
- Do not place the product on an unstable or tilted bench. Otherwise, it may drop and you may be injured.

#### CA Prop 65

### <u> WARNING</u>

This product can expose you to chemicals including lead,which is known to the State of California to cause cancer, and Di (2-ethylhexyl) phthalate (DEHP), which is known to the State of California to cause birth defects or other reproductive harm.

For more information, go to <u>www.P65Warnings.ca.gov</u> .

### www.GlobalTestSupply.com

- A protective sheet is attached to the LCD. Peel it off before use.
- Although the LCD monitor is manufactured to very high standards, it is possible to observe a few dead pixels on the screen. This is normal and not a malfunction of the meter.
- Use at altitudes below 2,000m (6,561 feet).
- Our company shall not be liable for any data loss caused by, but not limited to, malicious acts and control errors.
- You can install the software on the included CD-ROM only when you agree with all
  articles in the license agreement that comes with the CD-ROM.
- Be sure not to drop the meter or subject it to sudden impacts, as the meter will be damaged.
- Do not store the meter in areas of high temperature of high humidity, as the meter will be damaged.
- Be careful not to transport the meter from cold to warm moist conditions as condensation will form on the meter and may damage it.
- If the meter is operated in temperatures below -10°C, the response of the LCD will greatly slow down and the display may be difficult to view and read. This will not harm the meter. Also, if the temperature exceeds 50°C, the liquid crystal display will darken and become difficult to read, but when it returns to room temperature it will return to its normal condition.
- If the meter is left in direct sunlight, a vehicle, or near a heater, the unit's temperature will
  rise and may result in damage. Please be careful when using the meter in these types of
  locations.
- If the meter is left where corrosive gases may be generated, the gases may affect the product and may result in damage. Please be careful when using the meter in these types of locations.
- In case of disposing the meter, follow the rules of disposal in your area.

#### **Maintenance Notes**

- Be careful not to let the Light Receptor become dusty, dirty, or scratched as this may affect the precision of the measurement.
- If the meter becomes dirty, wipe it with a dry, soft cloth. Never use organic solvents such as thinner or benzine.

### 

- For used batteries, dispose of them according to the rules of your area.
- Insulate plus and minus terminals with tape or other insulation material.
- Do not disassemble the batteries.

The meter is designed for:

- Measuring correlated color temperature, deviation, color rendering properties (CRI, TM-30, SSI, TLCI/TLMF), illuminance, tristimulus value, chromaticity coordinates, dominant wavelength and excitation purity of various lighting sources such as LEDs, organic EL's and projectors.
- Measuring automotive LED headlights and other types of lamps.
- · Measuring the illuminance of optical bio-reactions.
- Controlling the illuminance and monitoring spectral distribution of light source for indoor agriculture.
- Evaluating the illuminance, color temperature, and color rendering properties of road lighting, indoor lighting, store lighting, and others.
- Checking the quality, illuminance and color of light source in production of any kinds of light source manufacturers.

#### Intended Users

The intended users of this product are the following.

- People monitoring the quality control of LED, OLED, projector illumination, etc.
- People controlling of illumination during installation and use of lamps used in museums, restaurants, work spaces, etc.
- People controlling color and brightness of illumination used for indoor agriculture.

#### Disclaimer

The Company shall not be liable for any direct or indirect damage resulting from the failure of this product or its use.

#### Restrictions

There are some cautions and restrictions regarding the use of this product. Please read and understand the following before using the meter.

### NOTICE

- The contents of this manual may be subject to change for the product's specification modifications and other reasons without prior notice.
   We recommend that you download the latest operating manual and use this product.
- The safety-related precautions such as «Safety Guide and Maintenance» and «Safety Precautions» conform to the legal and industry standards that were applicable at the time this operating manual was created. Therefore, this manual may not contain the latest information. If you are using the previous operating manual, please download and refer to the latest operating manual.
- The product may contain printing materials such as cautions related to safety and/or printing errors as a supplement to the operating manual.
- The contents of this operating manual may be reproduced for non-commercial purposes and for personal use only. However, the reproduced material must contain the copyright notice of our company.
- The reproduction of all or any part of this document without permission is strictly forbidden.
- The product concerned and/or this manual may be subject to future changes without prior notification.
- The screens in this operating manual may differ from the actual displays of the meter you are using. (Colors, letters, etc.)

1. Parts Designations and Functions

# 1-2 Parts Functions

The following table lists the functions of each part.

No.	Part Name	Functions	
1	Light Receptor	Point light receptor directly at light source during reading. Head rotates 270 degrees to aid reading.	
2	Light Selection Ring	Rotate to select dark calibration, normal measuring range or high range for flash light.	
3	Power Button	Press to turn ON/OFF.	
4	Display Panel	Displays the setting screens and measurement screens. The built- in touch panel function enables setting, selection or operation by touching the displayed screens. ( $\Rightarrow$ P17)	
6	Measuring Button	Press for measurement.	
6	Menu Button	Press to shift display to Display Mode Selection screen.	
7	Memory Button	Press after measuring to save the measured data.	
8	Battery Cover Latch	Latch for the battery cover.	
9	Battery Cover	Secures the batteries.	
0	Tripod Socket	Female mounting threads (1/4-20) for hands free mounting on tripods.	
1	USB Mini-B Connector	The USB connector for connecting to the PC with the installed utility and USB bus power. USB terminal: Mini-B-5pin	
12	Sync Terminal	Accepts an optional synchro cord when using meter in Cord (PC) Flash Mode.	
13	Strap Eyelet	Used to attach the included strap.	
14	Battery Compartment	Holds the batteries. Insert the batteries in the correct direction.

# **2.** Before Use

### 2-1 Attaching the Strap

- 1. Pass the strap (included) through the outer hole of the Strap Eyelet (3).
- 2. Pass the opposite end of the strap through the loop at the end of the strap.

### 🚹 WARNING

Infants or toddlers may accidentally wrap the strap around their neck, so please place it in a location out of their reach. There is a danger of suffocation.

### 

- Infants or toddlers may accidentally grab the strap and swing the product, so please place it in a location out of their reach, as the meter may be damaged by impacts.
- Be careful that the neck strap does not come loose when carrying the product, as the meter may be damaged when dropped.
- This neck strap is made of polyester fiber. Please refrain from using the product if synthetic fibers cause your skin to become irritated, inflamed or itchy in order to prevent worsening your symptoms.

Find Quality Products Online at:

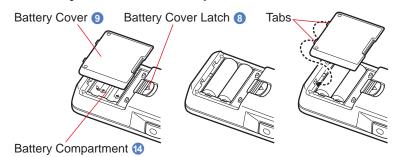

www.GlobalTestSupply.com

### 2-2 Installing the Batteries

- 1. Prepare two AA batteries.
- **2.** Slide the Battery Cover Latch (3) in the direction of the arrow and remove the Battery Cover (9).
- **3.** Insert the batteries according to the "+" and "-" symbols in the Battery Compartment **(0)**.

\* As shown in the diagram below, please note both positive sides of the batteries are facing in the same direction.

4. While lining up the two tabs on the Battery Cover (9), press the Battery Cover (9) back into place from above.

### 

Do not place batteries in open flames, attempt to short, disassemble, apply heat to, or recharge them (except rechargeable batteries). They may burst and cause fires, serious injury, or damage to the environment.

### 

- Use the manganese or alkaline batteries.
- Do not use batteries with any other rating than the one specified. Also, do not mix old and new batteries.
- Please insert the batteries minus "-" side first. When removing the batteries, remove them plus "+" side first.
- If the meter will not be used for an extended period of time, it is recommended to remove the batteries to avoid possible damage caused by battery leaking.

4

### www.GlobalTestSupply.com

### 2-3 Power ON/OFF

#### **Power ON**

- 1. Turn the Light Selection Ring 2 to set to the dark calibration position CAL (
- 2. Press the Power Button 3. The meter will turn on and the Opening screen will be displayed (for 2 seconds).

Light Selection Ring 2

#### 

- The blue lettered "SEKONIC" logo screen is displayed after battery replacement and 24 hours after power OFF.
- Movement of the blue status bar indicates that the meter is checking its memory and preparing to operate. Do not turn the power OFF. Otherwise, the meter may be damaged.

### NOTE

- If the LCD screen shows no display, check if the batteries are installed properly (Pos/Neg positioning) and have enough capacity.
- You can reduce start up time by simply tapping the screen when the Startup screen appears.

**Find Quality Products Online at:** 

# www.GlobalTestSupply.com

**3.** Select the language. (Appears only when turned ON for the first time)

The Language Selection screen is displayed. Select the language to use.

4. Press the [OK] to select the language.

The language can be switched at any time. (> P149)

**5.** Dark calibration.

The C-7000 measuring system must be calibrated before use. Turn Light Selection Ring to calibration indication. "Dark calibration in progress. Please wait" and the status bar will appear while calibrating. The Display Mode Selection screen will appear when operational.

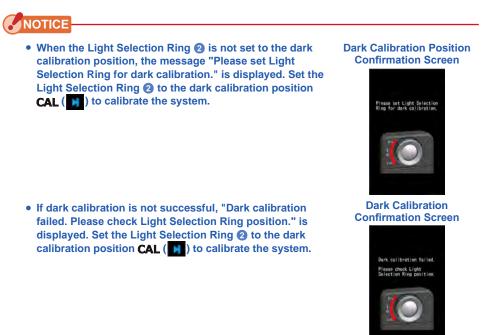

NOTE

• Dark calibration is performed when new batteries are used, 24 hours passed since last use or there is a big change in temperature between turning power OFF and ON. Except the cases above, dark calibration after power ON is skipped.

Find Quality Products Online at:

## www.GlobalTestSupply.com

6. Touch the icon to be displayed on the Display Mode Selection screen.

The display will switch to the selected measurement screen.

#### 7. Press the Measuring Button **5** to measure.

Turn the Light Selection Ring 2 to select the range. When measuring ambient light, make sure to select Range L  $\frac{4}{34}$  ( $\bigcirc$ ). When measuring flash units, select Range L  $\frac{4}{34}$  ( $\bigcirc$ ) or Range H  $\frac{4}{34}$  ( $\bigcirc$ ) depending on the brightness of of the flash. ( $\Rightarrow$  P102,  $\Rightarrow$  P103)

7

Find Quality Products Online at:

## www.GlobalTestSupply.com

nt failed.

Please check Light Selection Ring position

#### NOTICE

 When the Measuring Button () is pressed at the dark calibration position, the message "Measurement failed. Please check Light Selection Ring position." is displayed. Set the Light Selection Ring (2) to the correct position and the Measuring screen will be displayed.

 Measurement and display will take longer in light levels below 30lx. The LCD illumination will normally switch off during measurement to avoid influence to measurement.

#### **Power OFF**

1. Press and hold the Power Button ③ for 1 second or longer. The meter will turn OFF.

Please wait 3 seconds between repeated power on and power off sessions.

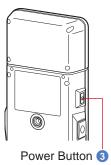

• All settings and measurements made during use are saved in memory even after the meter is powered off.

### 2-4 Automatic Power OFF Function

To save battery capacity, the meter will automatically turn off 5 minutes (factory setting) after the last button is pressed.

#### NOTE

- All measurements, settings and indications are saved in memory even after the meter has automatically turned off. When the power is turned ON, they will be displayed again.
- The default setting of Auto Power Off is 5 minutes. Other settings or "No auto power off" can be selected in the Customize of Setting screen. (+ P143)
- If, while in transport, the Power Button (3) is inadvertently and continually pressed in, the meter will turn ON for about 1 minute and then turn automatically turn OFF to save battery power.

**Find Quality Products Online at:** 

# www.GlobalTestSupply.com

sales@GlobalTestSupply.com

9

### 2-5 Checking the Battery Capacity

When the power is turned ON, the LCD screen will show the battery capacity indicator.

Sufficient battery life remaining.

Adequate battery life remaining.

g. indicator

Replace the battery immediately.

• When battery power is low and the meter is turned ON, the LCD screen will appear and then turn off immediately. This is an indication that the batteries are depleted and should be replaced immediately.

Having spare batteries on hand is recommended.

• When the meter is continuously used at room temperature, the battery life should last 8 hours (based on Sekonic testing methods).

### 2-6 Automatic Power OFF Function

- Always turn off the power before replacing batteries.
   If you replace batteries while the power is turned on, the measured values that are obtained during operations are not saved. Also, this may cause a failure.
- If an unexpected display appears on the LCD during battery replacement or measurement, ie. settings other than selected, or if the meter does not respond when a button is pressed, remove the batteries, wait at least 10 seconds, and then re-install them.

11

# **3.** Screen Operation

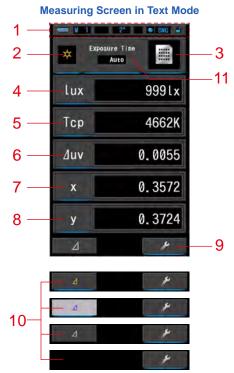

3-1	Screen and Operation	
3-1-1	Basic Screen and Operation	

The touch-screen display enables selecting Display Modes and settings with the touch of your finger.

#### **Measuring Screen**

When the dark calibration is complete, the Display Mode Selection screen is displayed. Select the desired display mode and the selected measurement screen is displayed. On the Measuring screen, it is possible to select the Measuring mode or change the measuring condition. Touch the icons with blue under-bar to change the setting. To change the Display Modes, refer to each explanation of Display Modes.

\* Pressing the Menu Button (6) on the meter returns the meter to the Display Mode Selection screen.

\* The display changes depending on the set measuring mode. \* For this description, all icons and menus are displayed.

## www.GlobalTestSupply.com

	Item List			
No.	Part Name	Description

#### 3-1-4 Locking and Unlocking the Screen

You can lock the screen to prevent misoperation.

When the screen is locked, touch operation is disabled.

However, the Memory Button 7, Measuring Button (5), and Power Button (3) are still operational.

The screen will stay locked even when power is turned OFF and ON.

#### **To Lock**

In any measuring mode, press and hold the Menu Button 6 to see the Locked icon [ ] appear at the upper right corner of the LCD screen. Function Icons cannot be operated while the

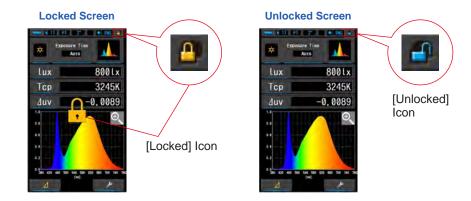

screen is locked. The Locked icon [ approximately 1 second at the center of the screen when function Icons are touched or MENU button 6 is pressed.

\* This lock function can be set in the Measuring screens only.

# Í Menu Button 6

#### **To Unlock**

When the Menu Button 6 is pressed and held again, the screen is unlocked.

### 4-2-2 Selecting the Exposure Time (Ambient Modes Only)

Set a Exposure Time for ambient measurement.

## Operation

**1.** Touch the [Exposure Time] indication on the Measurement screen. Touch the [Auto], [0.1 sec] or [1.0 sec] button.

#### **2.** Touch the [OK] button.

Confirms the settings, and returns to the previous Measuring screen. Touch [Cancel] to return to the previous Measuring screen without setting.

#### Exposure time is set.

In Auto mode, the C-7000 automatically selects among 15 measuring times, determined by the illumination available, to achieve a proper result in a convenient way.
 Two fixed reading times are available to enable exact comparison of multiple measurements.
 When measuring high illuminance levels, set the Exposure Time to 0.1 sec.
 When taking measurements in low Illuminance, set the Exposure time for 1.0 sec.

### NOTICE

 0.1 sec and 1.0 sec may not cover some measurement range of illumination and [OVER] or [UNDER] appears. In this case, set Exposure time to "Auto".

25

43

## www.GlobalTestSupply.com

### 4-4-4 Displaying in TM-30 [TM-30] Mode

Displays four current measurement values (Rf, Rg, Tcp, ightarrow uv) and color vector graphic. (+ P204)

The C-7000 with latest firmware shows TM-30-18.

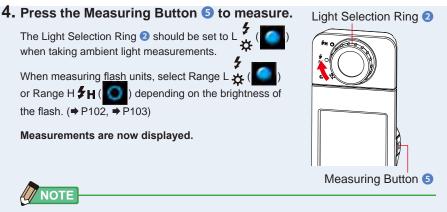

#### Operation

- 1. Touch the [TM-30] icon on the Display Mode Selection screen. A TM-30 distribution graph screen will be displayed. (⇒ P30)
- 2. Touch the [Measuring Mode] icon. The Measuring Mode Selection screen will be displayed. Select the desired measuring mode to use. (⇒ P23)
- 3. Touch the [Exposure Time] indication or [T (Shutter Speed)] indication on the Measuring screen.

For ambient light measurement, select the [Auto], [0.1 sec] or [1.0 sec] button. (⇒ P25) For flash light measurement, select the desired shutter speed. (⇒ P26)

**Find Quality Products Online at:** 

www.GlobalTestSupply.com

 Measurements and display will take longer in light levels below 30lx. The LCD illumination will normally switch off during measurements to avoid influence to measurements.

# 5. Current measurements and color vector graphic are displayed. Default Display Items are Rf, Rg and Tcp, ∠ uv.

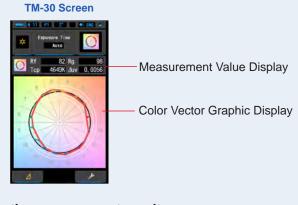

Color vector graphic is the visual representation of hue and chroma shifts around the hue circle divided by 16.

Color vector graphic shows the current measurement in the red line.

The standard light source is displayed in black slid line, and arrow shows the difference for current measurement.

White circles with radius shows Rg80, 90, 110 and 120.

Numbers from 1 to 16 represent hue-angle bins divided by 16 in 22.5 degree increment, which assign from 1 of red to 16 of reddish purple.

Memorize the measurement results.
 To record measurements, press Memory Button ♥ . (♥ P108)

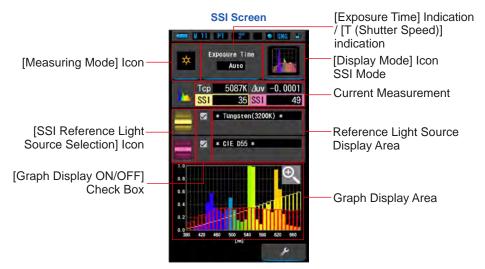

45

Find Quality Products Online at:

## www.GlobalTestSupply.com

### 4-4-5 Displaying in Spectral Similarity Index [SSI] Mode

Compares the current measurement value and up to 2 reference values (color temperature and  $\triangle$  uv), and displays SSI index with the SSI spectrum graph. Reference light source can be set in three ways from standard illuminant, color temperature input or memory recall. ( $\Rightarrow$  P205)

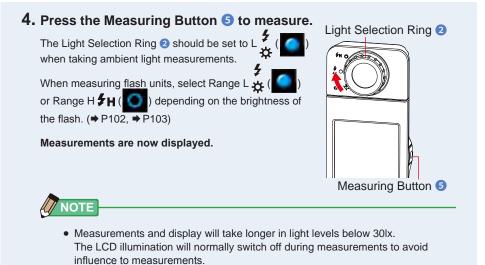

#### Operation

- Touch the [SSI] icon on the Display Mode Selection screen. The SSI screen will be displayed. (⇒ P30)
- 2. Touch the [Measuring Mode] icon. The Measuring Mode Selection screen will be displayed. Select the desired measuring mode to use. (⇒ P23)
- 3. Touch the [Exposure Time] indication or [T (Shutter Speed)] indication on the Measuring screen.

For ambient light measurement, select the [Auto], [0.1 sec] or [1.0 sec] button. (⇒ P25) For flash light measurement, select the desired shutter speed. (⇒ P26)

5. Measuring Light Sources [Measurement Screen]

### **5.** Measuring Light Sources [Measurement Screen]

Take a measurement by facing the Light Receptor 1 towards the light source to correctly measure the color temperature of the light source.

### NOTICE

- When taking measurements, the C-7000 should be located at a distance that is approximately 10 times (10X) the diameter of the light source being measured.
- To get accurate color from a light source, make sure not to get bounced or reflected light from a colored surface, or another light.
- Damage and dirt on the Light Receptor ① can affect the precision of the measurment. If the Light Receptor ① becomes dirty, wipe it with a dry, soft cloth. Never use organic solvents such as thinner or benzene.
- Be courteous to those around you that may be sensitive to flash, or bright light, please give them notice before taking a measurement.

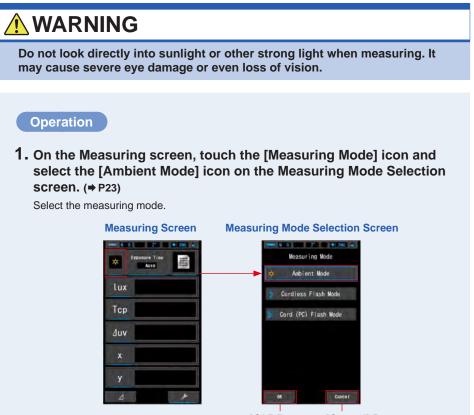

85

5. Measuring Light Sources [Measurement Screen] •

### 5-3 Measurement in Cordless Flash Mode

Cordless Flash Mode is preferable when wireless measuring is desired. In this measuring mode, the meter will go into measurement standby mode (for 90 seconds) to wait for a burst of flash to measure.

Operation 1. On the Measuring screen, touch the [Measuring Mode] icon and select the [Cordless Flash Mode] icon on the Measuring Mode Selection screen. Select the measuring mode. (⇒ P23) **Measuring Screen Measuring Mode Selection Screen** Measuring Mode Ambient Mode Lux Cordless Flash Mode Тср Cord (PC) Flash Mode ∆uv Cuncel [OK] Button [Cancel] Button

### 2. Touch the [OK] button.

Confirms and returns to the Measuring screen.

To return to the Measuring screen without confirming, touch the [Cancel] button.

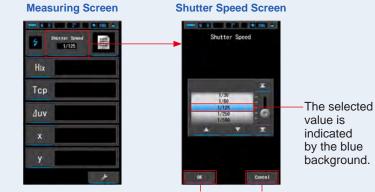

90

## www.GlobalTestSupply.com

#### 3. Touch the [Shutter Speed] indication on the Measuring screen.

Set the shutter speed used for measurements. (⇒ P26)

Match the blue background with the desired shutter speed.

[OK] Button [Cancel] Button

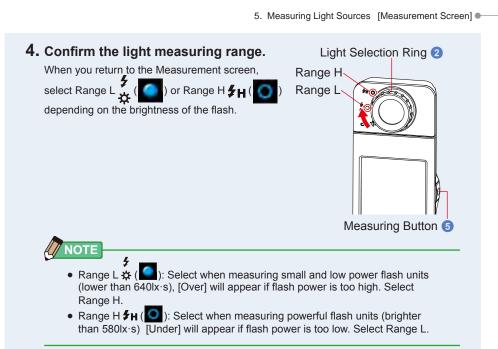

### NOTICE

• If you are using this measurement to judge color for photographic reproduction by adjustable camera, be sure to use a shutter speed that synchronize with the camera and flash system.

● Shutter speed can also be set in the Tool Box. (⇒ P128)

91

#### **5.** Press the Measuring Button **5**.

The meter will enter measurement standby mode. While the icon is blinking, manually trigger the flash. The [Measuring Mode] icon will blink for 90 seconds when measuring.

The display panel illumination will dim when the Measuring Button is pressed as the display illumination can affect the reading. This is normal.

When the flash light is fired, the measured value will be displayed for 3 seconds, and the display will return to measurement standby mode.

To cancel standby mode, touch the screen or press the Menu Button 6.

 When the icon stops blinking before triggering the flash, or when you want to restart the 90-second delay cycle again, press Measuring Button (5) again.

Measurement in Cordless Flash Mode is complete.

92

5. Measuring Light Sources [Measurement Screen] -

### **CAUTION**

- Do not trigger flash while skin or other objects are in contact with the flash tube. Do not touch the flash tube after repeated flashes. (It may cause burns.)
- Do not trigger flash while near the eyes of people or animals. (It may temporarily affect vision.)
- The flash may be triggered suddenly. Because there is the possibility of burns or negative effects on vision, please handle with care.

### NOTICE

- When using Cordless Flash Mode, the LCD screen backlight dims during measurement, and the LCD backlight is illuminated for only 3 seconds after measurement. To cancel standby mode, touch the screen or press the Menu Button (3).
- In case of the following, please follow "5-4 Measurement in Cord (PC) Flash Mode" (
   P94)
  - If the flash output power is too weak compared to the surrounding light, the meter may not detect the flash output.
  - Pulsed light sources such as fluorescent lights or special lighting could cause the meter to take cordless flash measurements in rare cases.
  - If the Light Receptor ① detects a sudden and bright change in lighting intensity, the meter may mistakenly take a measurement.
  - Because the light radiated from a flash bulb gradually builds, the meter will not detect the light when used in Cordless Flash Mode.

### 

- When using the meter in Cordless Flash Mode, it is possible to mount the meter to a light stand, tripod or similar support using the Tripod Socket 10.
- [Over] or [Under] will be displayed if the light source illumination is too bright or not bright enough, or if the color temperature is out of the measurement range, when the Measuring Button is pressed. (> P102) In this case, adjust the brightness or color temperature of light source, or switch the light range. (> P103)

5. Measuring Light Sources [Measurement Screen] -

### 5-4 Measurement in Cord (PC) Flash Mode

Cord (PC) Flash Mode is preferable when lighting conditions prevent the use of cordless measurements or when certain types of equipment require a physical sync connection.

In Cord (PC) Flash Mode, the meter and flash unit are connected with a Sync Cord (sold separately).

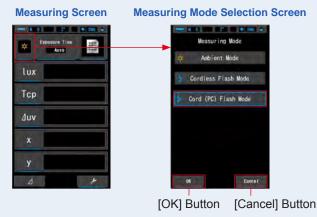

### 

- Do not handle this product with wet hands, or leave it in the rain or in a location where it may be splashed with water, submerged, or come into contact with moisture. There is a danger of electric shock in Cord (PC) Flash Mode. This may also result in damage to the product.
- When using flash with high voltage, there is a danger of electric shock if you touch the Sync Terminal (2). Handle the flash with care when using for measurement.

#### Operation

1. On the Measuring screen, touch the [Measuring Mode] icon and select the [Cord (PC) Flash Mode] icon on the Measuring Mode Selection screen.

Select the measuring mode. (⇒ P23)

# AUTION

- Depending on the flash equipment used, the flash may be triggered when the sync cord is connected to the Sync Terminal (2) or when operating the Power Button (3). Because there is the possibility of burns or negative effects on vision, please handle with care.
- Do not trigger flash while skin or other objects are in contact with the flash tube. Do not touch the flash tube after continuous flashes. (It may cause burns.)
- Do not trigger flash while near the eyes of people or animals. (It may temporarily affect vision.)
- The flash may be triggered suddenly. Because there is the possibility of burns or negative effects on vision, please handle with care.

### 

- If the triggering voltage of the flash used is extremely low, the flash may not trigger. In this care, use "5-3 Measurement in Cordless Flash Mode". (+ P90)
- In the Cordless Flash mode, the measured color temperature may change depending on the shutter speed set for flash measurement and the amount of ambient light present when the measurement is made.

range. (⇒ P103)

 [Over] or [Under] will be displayed if the light source illumination is too bright or not bright enough, or if the color temperature is out of the measurement range, when the Measuring Button is pressed. (
 P102)
 In this case, adjust the brightness or color temperature of light source, or switch the light

5. Measuring Light Sources [Measurement Screen] •

### When [Over] or [Under] is Displayed 5-6

When [Over] or [Under] is displayed, the light source is out of measuring range.

🔵 ) to H 🗲 H ( 🚺 ), or

### Display of [Over] or [Under] 5-6-1

### When [Over] is displayed:

If the indicated values are higher than the maximum measuring range, [Over] is displayed.

When measuring ambient light, decrease the brightness of the illumination.

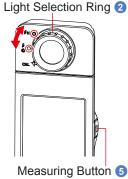

When measuring flash light, turn the Light Selection Ring 2, and change the range from L  $\frac{4}{2}$  ( lower the flash output power.

### When [Under] is displayed:

If the indicated values are lower than the minimum measuring range, [Under] is displayed.

When measuring ambient light, increase the brightness of the illumination.

When measuring flash light, turn the Light Selection Ring 2, ) to L 🗲 ( and change the range from H \$H ( or raise the flash output power.

NOTE

• Measurement and display will take longer in light levels below 30lx. The LCD illumination will normally switch off during measurements to avoid influence to measurements.

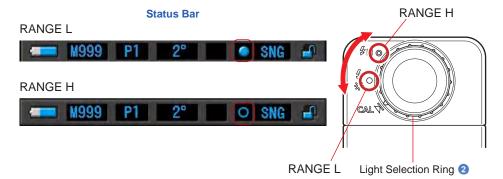

# www.GlobalTestSupply.com

### 5-6-2 Changing the Light Range

Change and use the light range depending on the brightness of the flash.

Light Selection Ring (Status Bar Display)			Content	
Dark Calibration Position	H	CAL	Select for dark calibration only. Measurement cannot be made in this position.	
Range L	۲	∳ ☆	Select for ALL ambient light measurement, and low power flash units (lower than 640lx·s/59.5fc·s)	
Range H	0	\$н	Select for powerful flash units (brighter than 580lx·s/53.9fc·s) only.	

Turn the Light Selection Ring 2 and select the desired range. The set range will be displayed on the LCD screen's status bar.

### 6-2 Using the Memory Function

The memory function enables storing light source data for single sources and groups of sources for recall at any time. Up to 999 measurements can be stored. Memory function also enables naming or renaming the title of memory and clearing the stored value.

108

**Find Quality Products Online at:** 

# www.GlobalTestSupply.com

### 6-2-1 Naming Measurement Values Being Memorized [Memory Title] Screen

You can create special titles for memorized values to make them easier to select, view and use data later.

To use this function the order of operation:

- \* Create memory title
- \* Measure light source
- \* Press Memory button 7 to memorize

Untit	led			The default name is
DEL	+		*	"Untitled".
	1	2	3	
	4	5	6	
	7	8	9	
1/A/a		0		

### **Memory Title Screen**

- A title can be a maximum of 16 alphanumeric characters.
- More than one measurement can be stored under one title.
- Up to 999 titles can be created.

**Find Quality Products Online at:** 

# www.GlobalTestSupply.com

### Operation

1. Touch and select the [Memory Title] button in the Tool Box.

The Memory Title screen will be displayed.

### 2. Enter the memory title. (⇒ P18)

Use the keyboard to create a name for the measured light.

### **3.** Touch the [OK] button.

Confirms and returns to the Tool Box screen.

To return to the Tool Box screen without confirming, touch the [Cancel] button.

**Find Quality Products Online at:** 

# www.GlobalTestSupply.com

### **4.** Touch the [Close] button.

The memory title is entered.

### 

- The memory title needs to be entered before memorizing.
- The memory title can be changed after memorizing in Memory Management function. (➡ P118)

### Light Selection Ring 2 5. Measure light. Press Measuring Button 6 to take a measurement. The Light Selection Ring 2 should be set to L when taking ambient light measurements. When measuring flash units, select Range L or Range H \$ H ( ) depending on the brightness of the flash. ### 7-4 Dark Calibration

Dark calibration is performed when new batteries are used, 24 hours passed since last use or there is a big change in temperature between turning power OFF and ON again. Except the cases above, dark calibration after power ON is skipped. Accordingly, when there are sudden changes in temperature experienced while using the meter may effect measured values. When temperature changes are encountered, perform dark calibration manually.

Dark Calibration Confirmation Screen	Light Selection Ring Status Indicator Chart

## 9-1 Glossary

Term	Description
Color Temperature	Color temperature refers to the chromaticity of a heated object (commonly refer to as a black body) that will vary according to its temperature. The color temperature is measured in units of Kelvin (K) and refers to the temperature of a heated object at a given color or chromaticity. The higher color temperature is, the bluer the light, and the larger the Kelvin value becomes. The lower the color temperature is, the redder the light, and the smaller the Kelvin value becomes. A figure that plots the changes of color temperatures on an xy chromaticity diagram is called the black body radiation locus.
Correlated Color Temperature	Not all light sources match the black body radiation locus when measuring light sources. In this case, the correlated color temperature is used. The correlated color temperature is a color temperature obtained by drawing an isotemperature line from the black body radiation locus which matches the measured value.
Light	This refers to the electromagnetic wavelength ranging from 380nm to 780nm that can be detected by the human eye.
Black Body	Theoretically, this is an object that absorbs all wavelengths and when heated, emits light equivalent to the applied color temperature.
Black-body Radiation	This refers to the light emitted by a black body. The amount of energy released for each wavelength changes with the applied color temperature, resulting in visible color variations.
к	Expressed in absolute Kelvin temperature, with units of "K". 0 (zero) K is equivalent to -273.15 °C or -459.67 °F.
⊿uv	The deviation between the correlated color temperature and the black body radiation locus. When the correlated color temperature is above the black body radiation locus, a "+" sign is assigned; when below, a "-" sign is assigned.
CRI (Color Rendering Index)	Quantifies the faithfulness of color appearance under a measured light source as compared to the color appearance under a standard light source. Differences are expressed for individual hues, R1-R15, or as an average (Ra) of values R1 through R8.
ТМ-30	Technical Memorandum TM-30 is, published by Illuminating Engineering Society (IES), the method for evaluating light source color rendition including LED lights. The C-7000 with latest firmware shows TM-30-18 which Rf is identical with Rf of CIE 224:2017. The values are based on color appearance of objects with 99 color samples compared to their appearance under the defined reference illuminant. In the TM-30, there are Fiedelity Index (Rf) which is to express how the accurate rendition of color is, and Gamut Index (Rg) to express what the average level of saturation is.

Term	Description
SSI	Spectral Similarity Index (SSI) is, defined by Academy of Motion Picture Arts and Sciences, Science and Technical Council, the method to express how close a test spectrum is to a reference spectrum. It is the index (SSI) to evaluate the similarity of spectrum of two light sources.
TLCI-2012	Television Lighting Consistency Index (TLCI), developed by EBU (European Broadcasting Union), the method to evaluate the color rendition (the color appearance of objects) under the reference light source with 18 color samples and a mathematical model of a broadcast camera to 'see' the colors. TLCI is suitable index to the evaluation of television lighting equipment.
TLMF-2013	Television Luminaire Matching Factor (TLMF) is, developed by EBU (European Broadcasting Union), a new companion metric to TLCI,TLMF allows you to compare two different lights to each other, rather than to a perfect reference, and see if they will play well together. TLMF is suitable index to the evaluation of televisioni lighting equipment.
CIE1931	This is the trichromatic system based on the color matching function, $\overline{x}$ ( $\lambda$ ), $\overline{y}$ ( $\lambda$ ), and $\overline{z}$ ( $\lambda$ ) that has been adopted by the CIE in 1931. (This is also called the XYZ color system that has a 2° viewing angle.) It is applied when the field of view is 4° or less.
CIE1964	This is the trichromatic system based on the color matching function, $\bar{x}_{10} (\lambda)$ , $\bar{y}_{10} (\lambda)$ , and $\bar{z}_{10} (\lambda)$ , which has been adopted by the CIE in 1964. (This is also called the XYZ color system that has a 10° viewing angle.) It is applied if the field of view exceeds 4°.
CIE1976	This chromaticity diagram features a scale so that the sense of difference of colors with the same illuminance becomes proportional to the geometric distance on the diagram at all points of the chromaticity diagram, which was determined by the CIE in 1976. This is calculated by the formula based on tristimulus values X, Y and Z or chromaticity coordinates x and y of XYZ color system.
Field of View	CIE standard observers help correlate instrumental color measurements to human visual assessments. The 2 degree field of view is common within quality control and other color evaluation procedures, particularly for food applications. The 10 degree field of view is considered to be more representative of how the human eye is commonly used with spectrophotometers for formulating and evaluating the color of various types of samples.
Photosynthetic Photon Flux Density	The photosynthetic photon flux density is the Photon is that the number of incident per unit time and unit area, needed for photosynthesis at a wavelength from 400nm to 700nm. The unit represent in µmol m <sup>-2</sup> s <sup>-1</sup> .

#### **Operating temperature**

• -10°C to 40°C (without condensation)

#### **Operating humidity**

• 85%RH or less (at 35°C) (without condensation)

### Transportation and storage conditions

• -10°C to 60°C (without condensation)

#### Dimensions

 Approx. 73 (width) × 183 (height) × 27 (depth) mm (excluding protruding part of light receiving) (max. thickness 40mm)

### Weight

• approx. 230g (without batteries)

### Included accessories

- CD-ROM (this Operating Manual and applications (Win, Mac)), Soft case, Strap, Startup Guide, Safety Precaution, Safety Requirement and Precaution, USB Cable (Mini-B connector)
- \* Models sold in some countries do not display illuminance and exposure in "fc (fc·s)" due to legal restrictions. In this case, Unit of Illuminance is not displayed.
- \* Specifications and appearance described in this Operating Manual are subject to change without prior notice for improvement.

209

### www.GlobalTestSupply.com

#### **Measurement Reference Plane**

• Tip of the Light Receiving Part

Color correction factor of the general illuminating light source against the CIE standard illuminant A: C-7000

Light source	Color correction factor
supplementary standard illuminant B	0.984
supplementary standard illuminant C	0.978
CIE standard illuminant D <sub>65</sub>	0.977
Fluorescent lamp F6	0.995
Fluorescent lamp F8	0.983
Fluorescent lamp F10	0.983
High-pressure sodium lamp	1.022
Metal halide lamp H1	0.978
Metal halide lamp H2	0.992
High-pressure mercury lamp	0.990

In the relative spectral responsivity characteristics of C-7000, error value from the standard spectral luminous efficiency V ( $\lambda$ ) is small (f1': 9% or less). Therefore, when using for ordinary purposes, correction based on the color correction factor is not necessary.

#### Distance range in which the Inverse Square Law is in effect

• 50 cm or more from the measurement reference plane

### **Incident Uniformity**

 This device is assumed to be used under the condition that the light receiving surface is completely covered by an almost uniform light in illuminance distribution. An error may occur in the case of highly directional light source or an uneven light distribution characteristic.

10. Optional Accessories

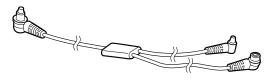

## **10.** Optional Accessories

### Synchro Cord

This is a five-meter (16.4 feet) long cord with three plugs.

An exposure meter, a camera and a flash can all be connected at the same time without having to plug or unplug the cord during shooting. Also, the connection terminal (male) on the light meter side of the synchro cord has a locking mechanism to ensure it remains connected to the meter.

(1 male terminal on the light meter side, 1 male terminal and 1 female terminal)

11. Troubleshooting

# **11**. Troubleshooting

The following cases may not suggest failures. Please check again before requesting repair. When the meter does not function normally after checking the following, it may be damaged. Remove the battery, and ask the retailer or us to repair it.

Status	Check item	Measure
It does not turn on (It does not display)	Are you pressing and holding the Power Button for one or more seconds?	Press and hold the Power Button for one or more seconds.
	Are $\oplus \ominus$ of the batteries inserted properly?	Check the $\oplus \ominus$ signs. ( $\Rightarrow$ P4)
	Are the batteries exhausted?	Replace the batteries. (➡P10)
	Are the battery terminals dirty?	Wipe them off with a dry cloth.
	Are you using the specified batteries?	Check the batteries. (➡P4)
The LCD does not respond	Is the screen locked?	Press and hold the Menu Button ⓒ to unlock the screen. (➡ P20)
The measurement cannot be made	Are you using the "C-700/ C-7000 Series Utility"?	Stop using the "C-700/C-7000 Series Utility".
The measured values are wrong	Is the Light Selection Ring in the middle position? The light distribution characteristics change and suitable measurements cannot be made.	Rotate the Light Selection Ring until it clicks.
	Is the measuring mode wrong? (Such as measuring in Ambient Light Mode in flash light)	Check if the measuring mode is correct. (➡ P23)
	Are you using the pre-flash function when measuring in Cordless Flash Mode?	In Cordless Flash Mode, the measurement value of the main flash may not be displayed because the pre-flash is measured at first. Cancel the pre-flash function.

213

Find Quality Products Online at:

### www.GlobalTestSupply.com

#### 11. Troubleshooting

Status	Check item	Measure
The memory function cannot be used	Is the differential measurement icon displayed?	The memory function cannot be used when the differential measurement icon is displayed. Cancel the differential measurement mode.
	Is "Memory Full" displayed when pressing the Memory Button?	The memory can store up to 999 values. Clear unnecessary memory values in advance, measure, and memorize it.

12. After-sales Services

## **12.** After-sales Services

- Contact your local distributor or camera store that you purchased from for warranty and service.
- Even within the warranty period, repair services may be provided on a paid basis.

Check the conditions of warranty provided by local distributor or retailer.

- The warranty is not valid unless the copy of proof of purchase with the date of purchase and the retailer name. Be sure to store such information (bill of purchase or receipt) in a safe location.
- We will retain performance parts for repairs for approximately seven years after production is discontinued. Therefore, we may not be able to carry out repairs after this period has elapsed.
- When requesting repairs, please provide us with as much detail as possible about the failure or specific failure locations that you are able to identify. In certain cases, some products that are returned to us for repairs are not malfunctioning, and begin to operate normally again when we simply replace the batteries. Before requesting repairs, please confirm that the batteries are installed in the correct polarities, contain sufficient charge, and that they match the rating.
- Repair service will be refused if there is a breakdown or damage due to disassembly or modification (including software), or if there are traces of disassembly or modification, even for products for which repairs are accepted.

215

### FCC & IC compliance information

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determine by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Caution: Any changes or modifications to this device not explicitly approved by manufacturer could void your authority to operate this equipment.

#### **FCC Warning**

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

#### For Canada CAN ICES-003(B) / NMB-003 (B)

#### **IC Warning**

This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes :

(1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'encompromettre le fonctionnement.
